

MusicMarket

Information & RAG Agent – Knowledge Base Document

Purpose: This document provides the core knowledge that the MusicMarket Information & RAG Agent can use to answer user questions about the platform, instruments, registration, buying, returns, trust, privacy, and general usage.

1. What is MusicMarket?

MusicMarket is a smart online platform for buying, selling, renting, and trading musical instruments. It connects individual buyers and sellers with registered music shops through a web and mobile-friendly platform.

Users can browse instrument listings, search for items, view detailed product information, contact sellers or shops, and manage their own activities. The platform is designed to make finding and trading musical instruments easier and more organized.

2. What Can You Get from MusicMarket?

Users can find musical instruments and related equipment offered by individual sellers and registered shops. Depending on the listing, an item may be available for sale, rent, or trade.

A listing normally contains important information such as the instrument name, brand, model, condition, price, location, description, and images. Buyers can compare available listings and contact the relevant seller or shop before making a deal.

3. What Types of Instruments Are Available?

MusicMarket can contain different categories of musical instruments and equipment, including:

- Guitars – acoustic guitars, electric guitars, bass guitars, and other guitar types.
- Keyboards – digital keyboards, electronic keyboards, and related instruments.
- Drums – drum kits, electronic drums, and individual drum equipment.
- Microphones – microphones for singing, recording, performance, and other audio use.
- Amplifiers – guitar amplifiers, keyboard amplifiers, and other instrument amplification equipment.
- Other musical equipment – additional instruments and accessories can be added as the platform grows.

The exact availability depends on the current listings from sellers and shops.

4. How Do I Register on MusicMarket?

A new user can register through the MusicMarket registration page.

The platform supports different account roles, including Buyer, Seller, and Shop Owner. During registration, the user provides the information required for the selected account type, such as name, email, phone number, location, and password.

After successful registration, the user can log in and access the features available for their role.

Shop registrations may require additional business or verification information. A shop can receive a verified status after the required review and approval process.

5. What Are the Benefits for Buyers?

MusicMarket helps buyers find musical instruments in one place instead of searching through many separate sources.

Buyers can:

- Search for instruments using keywords and categories.
- Filter items by price, condition, location, and listing type.
- View detailed information about an instrument.
- Compare different available listings.
- Find items from individual sellers and registered shops.
- Contact sellers or shops about an item.
- Save interesting items as favorites.
- Receive more relevant item suggestions based on their interests and activity.

The platform is intended to make the discovery and communication process easier. Buyers should still review the listing details and communicate with the seller or shop before completing a transaction.

6. Why Can Users Trust MusicMarket?

MusicMarket is designed with several features to support safer transactions and more trustworthy listings.

The platform can use AI-assisted checks to review listing information, identify unusual or suspicious activity, and support human review when necessary.

Listing information can be checked for completeness and consistency. Pricing can also be reviewed against available reference information. Suspicious listings or reports can be sent to an administrator for manual review.

Registered shops can go through a verification process and may receive a verified shop badge after approval.

These features are intended to improve trust and safety, but no online marketplace can guarantee that every transaction is completely risk-free. Users should verify important information and use safe communication and transaction practices.

7. Privacy Policy and User Data

MusicMarket should protect users' personal information and use it only for legitimate platform purposes.

Information collected by the platform may include account details such as name, email, phone number, location, and information related to listings or platform activity.

User information should be handled according to the MusicMarket Privacy Policy. Personal information should not be publicly exposed unless it is necessary for a platform feature or the user has chosen to

provide it.

Users should avoid sharing sensitive information such as passwords, banking credentials, or unnecessary personal documents through public listings or chat.

The final production system should provide users with a clear Privacy Policy explaining what information is collected, why it is collected, how it is used, how it is protected, and what rights users have regarding their information.

8. How Can I Return an Item or Resolve a Problem?

If a buyer receives an item that has a valid problem, is significantly different from the listing information, or there is another issue with the transaction, the buyer should first contact the seller or shop through MusicMarket.

A typical return or dispute process can be:

1. Open the relevant order or listing. 2. Contact the seller or shop and explain the problem. 3. Provide useful evidence such as photographs, messages, or other transaction information. 4. Agree with the seller or shop on an appropriate solution, such as a return, replacement, refund, or other resolution where applicable. 5. If the issue cannot be resolved directly, submit a report or dispute to MusicMarket support/admin. 6. The administrator reviews the available information and communicates the next step according to the platform's rules.

The exact return conditions can depend on the listing type, seller/shop policy, and transaction terms. The production platform should clearly display the applicable return and dispute rules before a transaction is completed.

9. How Does MusicMarket Help Me Find Musical Instruments?

MusicMarket provides search, filtering, and matching features to help users find suitable instruments.

A buyer can enter a search such as:

"I need a used acoustic guitar under Rs. 70,000 in Colombo."

The system can understand the important requirements, such as instrument type, condition, maximum price, and location, and search the available MusicMarket listings.

The platform can then show relevant instruments from individual sellers or shops. This reduces the need for users to manually search through unrelated listings.

In the future, AI-based matching and recommendation features can further personalize the results according to a user's requirements and interests.

10. Why Is MusicMarket Easy to Use?

MusicMarket is designed around a simple marketplace experience.

The main user flow is:

Open MusicMarket → Search or browse → Filter results → Open an item → Review details → Contact seller/shop → Complete the transaction.

Clear categories, search tools, filters, listing details, seller/shop information, favorites, and user dashboards help users move through the platform without unnecessary steps.

Different account roles also provide users with interfaces relevant to what they need to do. Buyers can focus on finding instruments, sellers can manage listings, shops can manage inventory, and administrators can manage platform operations.

11. How Do I Use MusicMarket?

A new buyer can use MusicMarket as follows:

1. Register as a Buyer. 2. Log in to the account. 3. Open Browse Instruments. 4. Search for an instrument or select a category. 5. Use filters such as price, condition, location, and listing type. 6. Open an instrument listing to view its full details. 7. Review the seller or shop information. 8. Contact the seller or shop if more information is needed. 9. If the buyer is satisfied with the item and terms, proceed with the available transaction process. 10. After the transaction, use the platform's support or dispute process if a problem occurs.

A seller can register as a Seller, create a listing, provide the required item details, review the generated listing information, and submit it for the platform's approval process.

A shop owner can register as a Shop Owner, provide the required shop information, manage inventory, and complete the shop verification process where applicable.

Agent Usage Note

The MusicMarket Information & RAG Agent should use this document as its primary knowledge source for questions about the MusicMarket platform. For questions that are outside this document or require current external information about musical instruments, brands, models, or music-related topics, the agent can use an approved web search tool and clearly distinguish external information from MusicMarket-specific information.

Example user questions:

“What is MusicMarket?”

“How do I register as a seller?”

“What instruments can I find?”

“How can I return an item?”

“How does MusicMarket help me find a guitar?”

“What can buyers do on MusicMarket?”
